The NAVICA app allows you to track results for your COVID-19 tests:
• Perform a COVID-19 test (digital instructions available)
• Create an account
• Download the app by scanning the QR code at any card
• Enter your COVID-19 test results (digital instructions available)
• Receive your results in an email.

For use Under an Emergency Use Authorization (EUA) Only
For use with anterior nasal swab specimens

This test is authorized for non-prescription home use with self-collected anterior nasal (nares) swab samples from individuals aged two years or older, with or without symptoms or epidemiological reasons to suspect COVID-19, and for serial screening. Performance may differ in these populations.

Due to the relatively small sample size for the home use clinical study, the BinaxNOW COVID-19 Antigen Test is intended for non-prescription home use in a self-care setting, as an aid to the healthcare provider in the management of individuals who test negative and continue to experience COVID-like symptoms of fever,乏力, cough and/or shortness of breath, especially when you do not have any symptoms.

Positive Result
A positive test result means it is very likely you have COVID-19 and is important to be under the care of your healthcare provider. The test is also likely to be positive if you have had close contact with someone who has COVID-19. You should contact your healthcare provider to make a treatment plan.

Negative Result
A negative test result means that proteins from the virus that causes COVID-19 were not found in your samples. This does not rule out infection. If your test result is negative, you should consider other factors that may contribute to your symptoms (such as having another illness). If you have symptoms, you should return to your healthcare provider for medical evaluation.

Inaccurate result may indicate you need to test again. Your test result should be considered only if you have symptoms consistent with COVID-19. If you have symptoms, you should report your result to your healthcare provider and follow your healthcare provider's recommendations for further testing and care.

INSTRUCTIONS - START HERE

Carefully read instructions prior to starting test. It is recommended gloves (not provided) also be used during testing. See other side for important information.

BEFORE STARTING
1. Wash or sanitize your hands. Make sure they are dry before starting.

A. PREPARE FOR THE TEST
Your box may contain more than one test kit. Use only 1 of each of the following for each test:
1 Swab
1 Test Card in Pouch
1 Dropper Bottle (not included)
1 Timing Device

2. Remove test card from pouch. Make sure the blue control line is present in the result window. Do not use the card if it is not.

Open the card and lay it flat on the table with the pink side down. You may bend the spine in the opposite direction to help the card lay flat.

3. Remove dropper bottle cap. Hold dropper bottle straight over top hole, not at an angle. Put 6 drops into top hole. Do not touch card with tip.

STOP
Check: Did you swab BOTH nostrils?

Note: False negative result may occur if the nasal swab is not properly collected.

STOP
Check: Did you swab BOTH nostrils?

Note: False negative result may occur if the nasal swab is not properly collected.

4. Open swab package at stick end. Take swab out.

B. COLLECT NASAL SAMPLE

5. Swab both nostrils carefully as shown.

Insert the entire soft tip of the swab into a nostril (usually 1/2 to 3/4 of an inch). You do not need to go deeper.

Using medium pressure, rub the swab against all of the inside walls of your nostril. Make at least 5 big circles. Do not just spin the swab.

Each nostril must be swabbed for about 15 seconds.

Using the same swab, repeat step 5 in your other nostril.

D. INTERPRET RESULTS

Check for Positive COVID-19 Result
Find result window and look for two pink/purple lines.

Positive Result: If you see two pink/purple lines (one on the top half and one on the bottom half), this means COVID-19 was detected.

Negative Result: If you see only one pink/purple line on the top half, where it says “Control” this means COVID-19 was not detected.

Check for Negative COVID-19 Result
Find result window and look for a single pink/purple line in window.

Check for Invalid Result
If you see any of these, the test is invalid. An invalid result means this test was unable to determine whether you have COVID-19 or not. A new test is needed to get a valid result.

E. DISPOSE THE TEST KIT
Throw away all used test kit components in the trash.

F. REPORT YOUR RESULTS
Report your test result through the NAVICA app and by contacting your healthcare provider.

Note: If you do not have symptoms, a second test should be taken at least 24 hours (and no more than 48 hours) between tests.

B. COLLECT NASAL SAMPLE
1. Open swab package at stick end. Take swab out.

4. Using medium pressure, rub the swab against all of the inside walls of your nostril. Make at least 5 big circles. Do not just spin the swab.

C. PERFORM THE TEST

6. Firmly push the swab tip from the lower hole until it is visible in the top hole.

Do not remove the swab from the card.

Do not touch card with tip. Do not mix the swab with the drops.

Note: False negative result may occur if the nasal swab is not properly collected.

Firmly push the swab tip from the lower hole until it is visible in the top hole.

Note: False negative result may occur if more than 6 drops of fluid are put in the hole.

7. Turn swab to right 3 times to mix the swab with the drops. Do not skip this step. Leave the swab in the card for the remainder of the test.

Note: False negative result may occur if swab is not turned.

B. COLLECT NASAL SAMPLE

4. Open swab package at stick end. Take swab out.

6. Firmly push the swab tip from the lower hole until it is visible in the top hole.
